**B.E. (Computer Engineering)
MOBILE COMPUTING
(2008 Course) (Elective - II) (410445)**

Time : 3 Hours]

[Max. Marks :100

Instructions to the candidates:

- 1) *Answer Question No. 1 or 2, 3 or 4, and 5 or 6 from section I and Q.No. 7 or 8, 9 or 10 and 11 or 12 from section II.*
- 2) *Answers to the two sections should be written in separate answer books.*
- 3) *Neat diagrams must be drawn wherever necessary.*
- 4) *Figures to the right indicate full marks.*
- 5) *Assume suitable data, if necessary.*

SECTION-I

- Q1) a)** Explain the operational and technical requirements of GSM. **[10]**
- b) List the equipments and explain its functions in radio subsystem of GSM system. **[6]**

OR

- Q2) a)** Explain the functions of operational and maintenance center (OMC) subsystem of GSM. Provide GSM System model architecture. **[8]**
- b) With the help of a diagram explain the use of echo canceller on PSTN MSC interface. **[8]**
- Q3) a)** Explain the structure of a TDMA slot with a frame for following bursts**[8]**
- i) Normal Burst
 - ii) Dummy burst
- b) Explain the functions of MSC, HLR and VLR. **[8]**

OR

P.T.O.

- Q4)** a) Elucidate the time organization of Traffic channel (full and half rate). [8]
- b) Explain the logical control channels in GSM. [8]

- Q5)** a) What do you mean by Frequency hopping? Why to use it in GSM? Describe in brief an algorithm for the same. [8]
- b) Explain time organization of following control channels

Signaling Channel (Downlink Only): Frequency and Time Synchronizing Channels. [10]

OR

- Q6)** a) Explain the functions performed within the IMSI detach procedure. [8]
- b) What are the steps in the establishment of PSTN-MS call. Explain the call set-up with suitable signal and response diagram. [10]

SECTION-II

- Q7)** a) What are the two basic security issues in GSM, different from the fixed telephone network, justifying the higher protection requirements in GSM. How are these issues addressed in GSM? [8]
- b) Explain the equipment identification process in the context of security management in GSM system. [8]

OR

- Q8)** a) Narrate conditions under which the system will be forced to ask mobile for its IMSI. Why is it absolutely essential for the operator to have authentication of the visiting subscriber? [8]
- b) Explain, with the help of a diagram, the encryption procedure adopted in the GSM system. [8]

- Q9) a)** What are the multiplexing issues in frequency and time domains? [8]
- b) What are the advantages and disadvantages of TDMA, FDMA, CDMA? [8]

OR

- Q10)a)** Explain the functioning of CDMA system. [8]
- b) Compare TDMA and FDMA. [8]
- Q11)a)** Explain the procedures provided by RR layer during “Connection establishment Phase”. [8]
- b) Explain in detail the Mobility Management Common procedure and Mobility Management Specific procedure. [10]

OR

- Q12)a)** List the basic functionalities provided by three sublayers of the Application layer. [8]
- b) Explain MAP protocols for basic service support. [10]

EEE
